Compare and Contrast:

Excursus - The danger of “downshifting”

Under distress and threat, the blood flow and electrical activity in the brain are in the brain stem and cerebellum and decreased in the midbrain and cortex. (Politano & Paquin)

The Hierarchy of Response

First Priority: Data interpreted as posing a threat to survival are processed immediately and take highest priority in the brain, causing all other processing in the brain to shut down.

- How would you react if you are trying to study at home and you smell burning from your kitchen?

Second Priority: Data interpreted as posing a threat to emotions takes second highest priority in the brain, causing all other processing in the brain to shut down.

- Anger, frustration, fear, stress, joy can all overcome rational thoughts.
- Such override of conscious thought can be strong enough to cause temporary inability. (“I froze.”)

Third Priority: Data interpreted as new learning takes third highest priority.

- If we *feel* physically and emotionally safe we can process and learn new information.

Bible memory – two types

Biblical narrative

Bible memory – narratives for appropriation and application

For each doctrine or faith life question, consider a 15 – 20 verse narrative for the response.

God's world governance:

Sibling relationships frayed:

Doubt that God answers prayers:

Vicarious atonement:

Purpose of suffering:

Spirit's work of regeneration:

Doctrine of fellowship:

Evangelism witness in deeds, not just words:

Exclusivity of Christianity as only true religion:

Power over devil and demons:

Biblical verses

Treasury of Techniques

- Rhyme
- Acrostics
- Imagination and exaggeration
- Stacking and yoking
- Chunking
- Cadence
