

[Alice Springs, Australia]

1. This location receives less than 5 cm of precipitation in any given month.
2. Averaging 29°C, January is clearly its warmest month.
3. Its elevation is below 1000 m.
4. Located on the Tropic of Capricorn, this location will certainly refresh visitors.

[Ankara, Turkey]

1. This Northern Hemisphere location has an elevation of less than 900 m.
2. December, January, and May appear to be its wettest months.
3. July and August are both its driest and hottest months.
4. February temperatures hover just above 0°C.

[Baghdad, Iraq]

1. This location sees little or no precipitation from June to September.
2. Located in the Northern Hemisphere, this location has an elevation below 50 m.
3. Hottest months are May, June, July, and August.
4. This location is 44° east of the Prime Meridian.

[Barrow, Alaska, USA]

1. This location has an elevation below 25 m.
2. It is nearly 160 degrees west of the Prime Meridian.
3. Its coldest months are clearly January, February, and March.
4. May's average temperature will freeze water.

[Beijing, China]

1. This location's wettest month is July.
2. Temperatures average about 25° C in June, July, and August.
3. This location has an elevation just over 50 m.
4. This location is south of the Arctic Circle.

[Bombay, India]

1. This location's rainy season runs from June to September.
2. Temperatures throughout the year stay between 21° C and 31° C.
3. The elevation of this location is below 15 m.
4. This location is nearly 80° east of the Prime Meridian.

[Boston, Massachusetts, USA]

1. This city is located just north of the 40<sup>th</sup> parallel.
2. This city's elevation is a little above sea level.
3. Look for just over 10 cm of December precipitation.
4. July is clearly its warmest month.

[Buenos Aires, Argentina]

1. This Southern Hemisphere city is located just west of the 57<sup>th</sup> meridian.
2. Its elevation is below 30 m.
3. Temperatures during its coldest months of June, July, and August hover around 10° C.
4. March precipitation exceeds 10 cm.

[Cairo, Egypt]

1. This desert location shows nearly no monthly precipitation.
2. Its latitude is 30° away from the Equator.
3. July and August temperatures average nearly 30° C.
4. Its elevation is below 75 m.

[Calcutta, India]

1. The rainy season of this location runs from March through October each year.
2. Its elevation is just above sea level.
3. Because of its tropical latitude, April through October temperatures remain constant.
4. This city is found east of the Prime Meridian.

[Cape Town, South Africa]

1. This Southern Hemisphere city has an elevation below 50 m.
2. No month from November through March receives more than 5 cm of precipitation.
3. Its coldest months are June, July, and August.
4. It is found east of the Prime Meridian.

[Chicago, Illinois, USA]

1. This city is located 42° from the Equator.
2. Its elevation is 200 m above sea level.
3. January is clearly its coldest month.
4. June and August precipitation are nearly identical.

[Christchurch, New Zealand]

1. This city is located 7° from the International Date Line.
2. July marks the coldest part of its winter.
3. Its elevation is just above sea level.
4. April appears to be its wettest month.

[Dakar, Senegal]

1. This city is found just west of the Prime Meridian.
2. Annual temperatures range between 19° C and 29° C.
3. There is a definite rainy season during July, August, September, and October.
4. Its elevation is just over 20 m.

[Darwin, Australia]

1. Annual temperatures fall between 22° C and 29° C.
2. May through August produce little measurable precipitation.
3. The wettest months are January, February, and March.
4. This city is found 12.5° from the Equator.

[Helsinki, Finland]

1. December through March temperatures average below 0° C.
2. This city's elevation is just over 50 m.
3. Precipitation does not exceed 10 cm in any month.
4. This Northern Hemisphere city is south of the Arctic Circle.

[Hong Kong, China]

1. This tropical city is found east of the Prime Meridian.
2. Its elevation is below 50 m.
3. Its wettest months are May through September.
4. Its warmest months are May through September.

[Honolulu, Hawaii, USA]

1. Monthly temperatures in this tropical location range between 22° C and 28° C.
2. Precipitation does not exceed 10 cm in any month.
3. Its elevation is just above sea level.
4. It is 21° away from the Equator.

[Kampala, Uganda]

1. Located on the Equator, this city has little temperature fluctuation.
2. April is its wettest month.
3. Its elevation is below 1500 m.
4. Its longitude is east of the Prime Meridian.

[Khartoum, Sudan]

1. This location sees little or no precipitation for nine months out of the year.
2. Its elevation is below 500 m.
3. May and June are its warmest months.
4. It is found more than 30° east of the Prime Meridian.

[Lima, Peru]

1. Monthly precipitation is nearly nonexistent.
2. The elevation of this location exceeds 10 m.
3. Found in the Southern Hemisphere, this city is more than 75° from the Prime Meridian.
4. February and March appear to be its warmest months.

[London, England, UK]

1. This city receives less than 10 cm of precipitation monthly.
2. Located more than 50° from the Equator, this city is on the Prime Meridian.
3. July appears to be its warmest month.
4. March and April are its driest months.

[Manaus, Brazil]

1. Located just south of the Equator, this city has little temperature range.
2. The first four months of each year seem to be the wettest.
3. It is found 60° from the Prime Meridian.
4. Its elevation is below 75 m.

[Manila, Philippines]

1. Not quite 15° from the Equator, this city's elevation is below 20 m.
2. Its wettest months are July, August, and September.
3. The tropical climate offers little temperature change.
4. January through April are its driest months.

[Mbandaka, Democratic Republic of the Congo (formerly Zaire)]

1. This city is located on the Equator.
2. This city's monthly temperatures are at or below 25° C.
3. This city's elevation is below 30 m.
4. This city's wettest month is October.

[McMurdo Station, Antarctica]

1. Monthly temperatures never rise above 0° C.
2. There is little or no monthly precipitation.
3. The elevation of this location is just above sea level.
4. The longitude of this location is 13° from the International Date Line.

[Mexico City, Mexico]

1. The elevation of this city rises above 2200 m.
2. This city is found nearly 100° from the Prime Meridian.
3. December, January, and February show little precipitation.
4. Monthly temperatures range between 10° C and 20° C.

[Miami, Florida, USA]

1. The elevation of this city is just above sea level.
2. September appears to be its wettest month.
3. Its tropical latitude is 26° from the Equator.
4. June through September are its warmest months.

[Mogadishu, Somalia]

1. This arid city lies just north of the Equator.
2. This city sees little variation in monthly temperatures.
3. This city's elevation is just above sea level.
4. December, January, and February see little or no precipitation.

[Montreal, Quebec, Canada]

1. No month sees more than 10 cm of precipitation.
2. The elevation of this city is below 50 m.
3. July appears to be the warmest month.
4. This city lies nearly 75° from the Prime Meridian.

[Omsk, Russia]

1. The elevation of this city is below 100 m.
2. It is found less than 60° from the Equator.
3. February, March, and April appear to be its driest months.
4. Winter temperatures often dip below - 10° C.

[Perth, Australia]

1. This city's elevation lies below 25 m.
2. December, January, and February are its driest months.
3. June, July, and August are its coolest months.
4. This Southern Hemisphere city lies 116° from the Prime Meridian.

[Phoenix, Arizona, USA]

1. The elevation of this city is below 500 m.
2. The lack of monthly precipitation indicates an arid climate.
3. Its latitude is nearly 35 from the Equator.
4. Its warmest months see temperatures over 30° C.

[Quito, Ecuador]

1. This mountainous city is found on the Equator.
2. There is little variation in monthly temperatures.
3. This city is nearly 80° from the Prime Meridian.
4. June, July, and August are its driest months.

[Reykjavik, Iceland]

1. The latitude of this city is near the Arctic Circle.
2. No month sees more than 10 cm of precipitation.
3. The elevation of this city is just above sea level.
4. December, January, and February temperatures are 0° C.

[Rio de Janeiro, Brazil]

1. The elevation of this Southern Hemisphere city is below 50 m.
2. Monthly temperatures range between 20° C and 30° C.
3. The latitude is 23° from the Equator.
4. December, January, February, and March are the wettest months.

[Rome, Italy]

1. June, July, and August appear to be the driest months.
2. The elevation of this city is just above sea level.
3. This Northern Hemisphere city lies  $12.5^\circ$  from the Prime Meridian.
4. January and February temperatures fall below  $10^\circ$  C.

[San Juan, Puerto Rico]

1. This city's elevation is just above sea level.
2. This city's monthly temperatures range between  $20^\circ$  C and  $30^\circ$  C.
3. February and March appear to be its driest months.
4. This city lies nearly  $70^\circ$  from the Prime Meridian.

[Santiago, Chile]

1. The elevation of this city exceeds 500 m.
2. Four months out of the year show little or no precipitation.
3. Its coolest months are June, July, and August.
4. Its latitude is south of the Tropic of Capricorn.

[Seattle, Washington, USA]

1. The elevation of this city is just above sea level.
2. The wettest months are November, December, and January.
3. November through March temperatures average below  $10^\circ$  C.
4. The latitude of this city is below  $50^\circ$  N.

[Seoul, South Korea]

1. This Northern Hemisphere city is located just south of the  $38^{\text{th}}$  Parallel.
2. Its elevation is below 50 m.
3. October through March temperatures may fall below  $20^\circ$  C.
4. June through September provide the warmest temperatures.

[Singapore, Singapore]

1. Monthly temperatures are just under  $30^\circ$  C.
2. The wettest months are November, December, and January.
3. The city lies  $1^\circ$  from the Equator.
4. The elevation of this city is 10 m.

[Sydney, Australia]

1. The longitude of this city is 29° from the International Date Line.
2. July through December see monthly precipitation of less than 10 cm.
3. June, July, and August are the coolest months.
4. The elevation of this city is just over 40 m.

[Tokyo, Japan]

1. The elevation of this city is just above sea level.
2. September and October are the wettest months.
3. Winter temperatures range between 0° C and 10° C.
4. This city is found 140° from the Prime Meridian.

[Tombouctou, Mali]

1. This city lies within 3° of the Prime Meridian.
2. Most months show little or no precipitation.
3. The elevation of this city exceeds 100 m.
4. Seven months of the year see temperatures of 30° C or above.

[Ulan Bator, Mongolia]

1. The elevation of this city exceeds 1000 m.
2. Annual temperatures range from nearly - 30° C to 25° C.
3. Eight months out of the year show little or no precipitation.
4. This city lies 48° from the Equator.

[Winnipeg, Manitoba, Canada]

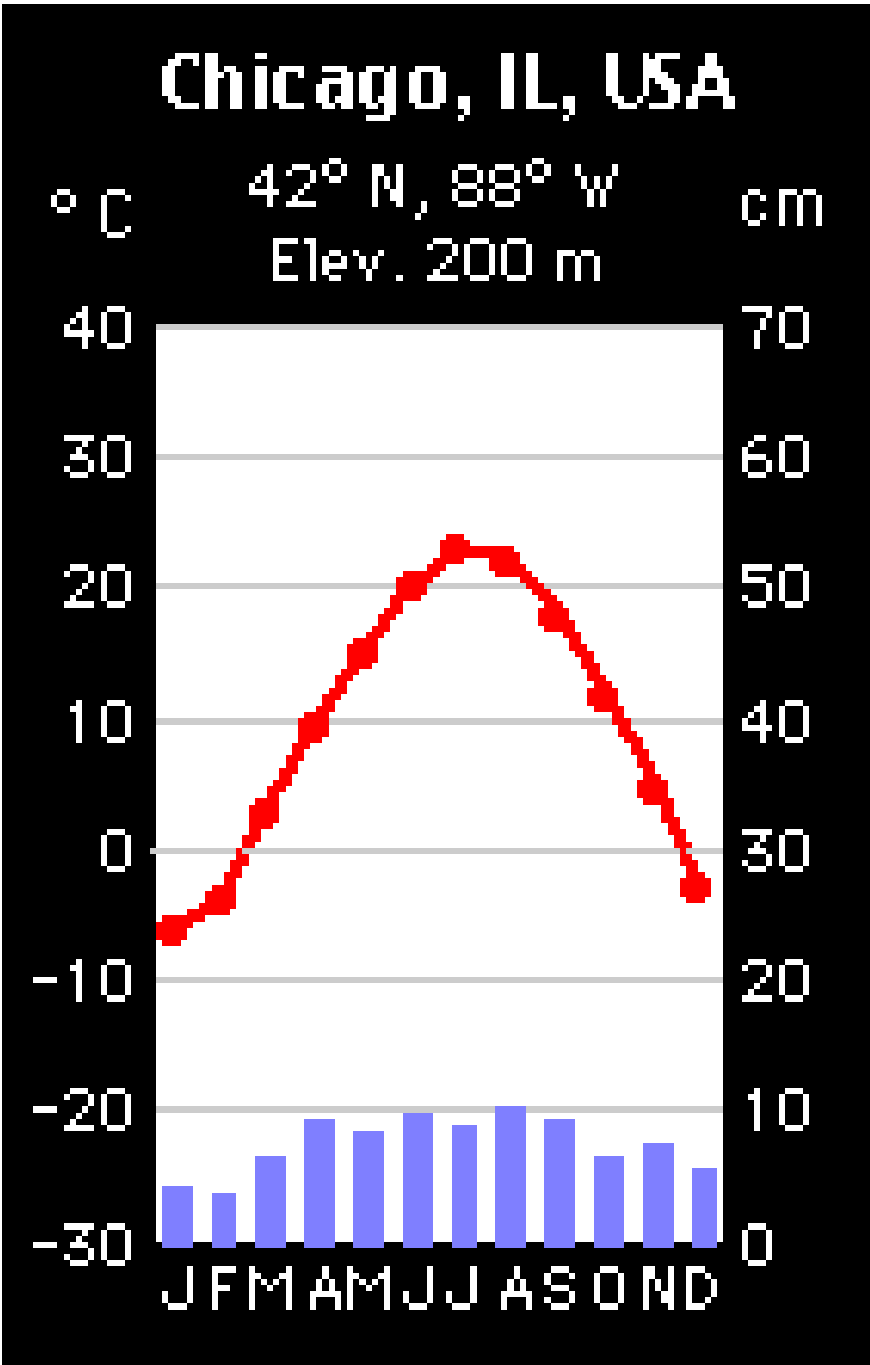

1. This city lies 50° north of the Equator.
2. No month receives more than 10 cm of precipitation.
3. July appears to be the warmest month.
4. This city has an elevation greater than 200 m.

[Yakutsk, Russia]

1. This city lies more than 60° from the Equator.
2. Its elevation exceeds 50 m.
3. Winter temperatures may drop below - 40° C.
4. No month receives more than 10 cm of precipitation.
